These atmospheric poisons are breathed into the lungs and taken up by the blood, and the foundation of some long, debilitating illness is laid. Chills and fever, chronic dyspepsia, torpid and enlarged liver, kidney troubles, jaundice and biliousness are frequently due to that invisible foe, Malaria. Noxious gases and unhealthy matter collect in the system because the liver and biliousness fail to act and are ponved into the blood current until the liver and kidneys fail to act, and are poured into the blood current until it becomes so polluted and sluggish that the poisons literally break through the akin, and carbuncles, boils, abscesses, ulcers and various eruptions of an

The germs and poisons that so oppress and weaken the body and destroy
the life-giving properties of the blood, rendering it thin and watery, must
be overcome and carried out of the system before the patient can hope to get rid of Malaria and its effects.
